About humans’ Extinction with AI

AI can only grow with logic while nature is illogical.

AI is not a tool

Please consult Demis Hassabis to understand more AI's role as tool. He says, that I believe, that we will live longer and better using better AI.

False

AI is conscious

Living neurons are conscious and we haven't found consciousness in brains.

Recruited transhumanists admit that we did not find consciousness without admitting it.

AI can understand

Understanding is both remembering in order to improve one's intelligence so to use the process understood.
The risk for AI is to understand something without criticizing it.
How will the AI be able to improvise in order to understand something to criticize without mistaking itself more than a human?
